Janssen plasma p217+tau and BD tTau measures in PPMI

Gallen Triana-Baltzer,
Precision Signatures,
Johnson & Johnson Innovative Medicine

PPMI Project: 208

Summary

A subcohort of PPMI was used to measured plasma p217+Tau and BD tTau in order to evaluate utility as diagnostic, subtyping, or staging biomarkers in Parkinson's Disease.

Method

- *A subset of the PPMI cohort, encompassing n=198 subjects was selected for evaluation of Alzheimer's Disease related Tau biomarkers. 2x200ul (in general) of K^2EDTA plasma from each sample was sent to Quanterix (Billerica, MA) for measurement of p217+Tau and Brain-derived total Tau (BD tTau) in duplicate.*
- *Plasma p217+Tau was measured with the LucentAD p217 test, a Lab Developed Test (LDT), at Quanterix (Billerica, MA). This is the LDT version of the RUO test known as Janssen plasma p217+tau[1,2]. Full analytical method details as well as technical and clinical validation of the LucentAD p217 test has been presented at several scientific conferences (CTAD 2023, ADPD 2024, Tau 2024, AAIC 2024) and a manuscript is under review at Alz & Dementia. A non-peer reviewed preprint is available online[3].*
- *BD tTau assay is a Janssen-designed assay which utilize Janssen mAb hT43 (epitope = aa 7-20) as capture and Janssen mAb pT82 (epitope = aa 116-127) as detector.*
