

README : DAT SPECT Quantitative Analysis Results

On December 1st 2024, the PPMI Core Lab transitioned from Invicro/Perspective (I/P) to XingImaging (XI).

The Primary PPMI DAT SPECT quantitative analysis results are now derived from the XI analysis pipeline. This includes all data prior to 1st Dec 2024 which have also been reanalysed with the XI pipeline. All of these data reside here [PPMI Imaging data](#). Details on the methods used to process these data can be found here ([DaTSCAN SPECT Quantitative Analysis Methods v1.0](#)).

Prior results derived from the I/P analysis pipeline up until the 1st Dec 2024 are now archived and can be found here [Archived PPMI Imaging data](#). Details on the methods used to process these data can be found here ([DaTscan SPECT Image Processing SBR Calculation Methods](#)). No results for the I/P analysis will be provided for scans after 1st Dec 2024.

Investigators wishing to work with the PPMI Quantitative DAT SPECT data should use the data derived from the XI pipeline.
